

TABLE OF CONTENTS

GENERAL PROBLEMS OF ELECTROMECHANICS

- Vereshchagin V.P., Klabukov V.A., Rogoza A.V. (JSC «VNIEM Corporation»)**
MAGNETIC FLOW CLOSED-CYCLE ELECTROMAGNETIC BEARINGS CONTROL.....3
The article deals with a consideration on control of electromagnetic bearings using magnetic flow from electric magnet status «looker». Various types of control of current and electric magnet flow have been compared. Advantages of magnetic flow control were illustrated, especially with respect to solid iron core electric magnets.
Key words: electromagnetic bearing, control, looker.

SPACE ELECTROMECHANICS. SPACECRAFT

- Bocharov V.S., Generalov A.G., Gadjiev E.V. (JSC «NIEM»)**
«IONOSPHERE» SPACECRAFT ANTENNA SYSTEM.....11
An antenna system of «Ionosphere» spacecraft of «Ionosonde» space complex has been developed. Main characteristics of helical-beam, pivot and dipole antennas are described.
Key words: spacecraft, helical-beam antenna, dipole antenna, pivot antenna, polarization, magnification ratio, standing wave ratio, power output.

- Bezrodnikh I.P., Morozova E.I., Petrukovich A.A. (SRI RAS)**
Semenov V.T. (JSC «VNIEM Corporation»)
ASSESSMENT OF OPTIMAL PARAMETERS OF SCREENS FOR PROTECTING SPACECRAFT
ELECTRONIC SYSTEMS AGAINST IONIZING RADIATION.....15
Basing on data of penetration capability of earth radiation belt particles and their energy and special distribution in near-Earth space, it was deduced that the increase of mass thickness of sun synchronous SC protective screen for more than 2,0 gr/cm² is not expedient. For far-orbit and geostationary spacecraft it is not expedient to increase the mass protective thickness for more than 2,5 gr/cm². The above mentioned protection screens enable to cut off a soft constituent of ionizing radiation. Only hard constituent of ionizing radiation that has a great penetration capability remains under the protection screen. That is the reason why the further increase in thickness of the protecting screen does not lead to a significant decrease of the absorbed dose. If the indicated thickness of the screen does not provide the desired level of operational reliability of the electronic system, it is recommended to replace the problem electronic components for more radiation-resistant ones.
Key words: radiation absorbed dose, radiation belts, radiation preservation, space rays.

- Gorbulin V.I., Zozulya P.P., Kargu D.L.,**
Kotyashov E.V., Tchernyavsky V.A. (Military space academy n.a. A.F. Mozhaysky)
OPERATIVE COMPUTATION OF INTERVALS OF PRESET DURATION FOR OBSERVING SPACECRAFT
ON CIRCULAR AND ELLIPTIC ORBITS.....19
The article presents an analysis of normative documents and practice of leading foreign institutes of the USA (US Department of Defense, NASA) and EC (ESA) in the field of experimental tests of space hardware for mechanical effects. Foreign and national experiences in development tests have been compared, substantial differences in terminology and test methodologies were revealed. Actively applied abroad alternative approaches to reliability testing enabling to lower expenditures for development testing by way of combination of qualification and acceptance tests are described herein.
Key words: spacecraft, normative documents, design performed test, design development tests, preliminary tests, acceptance tests, alternative strategies, protoflight.

- Dvurechensky V.D., Fedotov A.Yu. (JSC «VNIEM Corporation»)**
IMPEDANCE DIPOLE ANTENNAS.....23
A possibility of state-of-the-practice in broadband of potential efficiency of centre-face dipoles through the inclusion of periodic structures of lumped impedances into its arms. The electrical characteristics of impedance centre-face dipoles upon availability of three-wire reflectors and directors consisting of two pieces of metal wire have been investigated in frequency band. A feasibility of dipole antennas with high value directional operation (up to 10 dB) using impedance centre-face dipoles operating in broadband was shown.
Key words: impedance centre-face dipole, dipole antennas.

ELECTROMECHANICS AND SOCIOECONOMIC DEVELOPMENT OF THE COUNTRY

- Klyushnikov V.Yu (FSUE TsNIImash)**
Radionov N.V. (Military space academy n.a. A.F. Mozhaysky)
AUTOMATED ECOLOGICAL ZONATION OF ROCKET-AND-SPACE ARMAMENT EXPLOITATION REGION.....29
A problem of ecological zonation of rocket-and-space armament (RSA) exploitation region is stated and a methodology of its solution is proposed. The ecological zonation of RSA exploitation region enables to justify and limit the region for observing affects of RSA on environment.
Key words: ecology sounding, environment, biotope.

- Karelin A.V. (FSUE TsNIImash)**
Amelin L.A. (JSC «NIEM»)
Khiblin I.N. (JSC «VNIEM Corporation»)
ECONOMICS OF NOC FACILITY FOR NUCLEAR WASTE DISPOSAL.....33
The economic characteristics of nuclear optical converter (NOC) facility for disposing nuclear wastes have been considered. The economical indicators of NOC facility as well as of dry and wet depositaries were comparatively analyzed. It was shown that the payback period of the depositary without reloading SNF is 8 years, the economic effect is achieved by means of heat release to consumers.
Key words: nuclear optical converter, radioactive wastes, disposal, heat-carrying medium, gas mixture, argon, nitrogen, active zone (depositary), sphere.

PAGES OF NATIONAL SPACE METEOROLOGY HISTORY

- Makridenko L.A., Volkov S.N., Gorbunov A.V., Khodnenko V.P. (JSC «VNIEM Corporation»)**
THE BEGINNING OF NATIONAL SPACE METEOROLOGY.....45
A history of origin of first national meteorological ESV is presented. A period of development of national space meteorology from creation of ESV «Omega» to first meteorological satellites is considered herein.
Key words: meteorology satellite, electromechanical attitude control system, weather forecast, upper atmosphere, booster, space system.
