

TABLE OF CONTENTS

GENERAL PROBLEMS OF ELECTROMECHANICS

Liberman M.Yu., Zubrenkov B.I., Grabilin A.O. (JSC «VNIEM Corporation»)

MODERN METHODS FOR ANALYSIS OF ACOUSTIC AND VIBRATIONAL FIELDS STRUCTURE GENERATING WITHIN ELECTRIC MOTORS COOLING SYSTEM.....3

The article deals with results of theoretic analysis and experimental research of acoustic and vibrational fields structure forming in air cooling system of electric motors of special designation. It was established, that hollow spaces and structures enclosing hollow spaces of the cooling system are exposed as to proper acoustic and structural excitations so related to them structure acoustic modes of proper vibrations. Main mechanisms generating noises within the cooling system were defined and general design principles of low noise cooling systems of electric motors were considered.

Key words: air cooling system, aerodynamic noise, acoustic mode, structural mode, structural acoustic mode, principle of mutuality, acoustic intensimetry.

SPACE ELECTROMECHANICS. SPACECRAFT

Galushko A.I., Grom Yu.I., Lazarev A.N., Salikhov R.S. (JSC «NIEM»)

RESEARCH OF PROPERTIES OF IONISTORS AND EFFICIENCY OF THEIR APPLICATION WITHIN SPACECRAFT POWER SUPPLY SYSTEMS.....15

Preliminary results of ionistors properties investigation and developments of sheet-oriented solutions for their effective application is presented.

Key words: ionistors (supercondensers), SC power supply system, power sources, storage batteries, DC/DC converters.

Bogatiy A.V., Dyakonov G.A., Nechaev I.L., Popov G.A. (NII PME MAI)

Maryashin A.Yu., Khalapyan K.G. (Limited liability company «Nyukon»)

PERSPECTIVES FOR IMPROVING OVERALL DIMENSIONS AND MASS CHARACTERISTICS OF ABLATION PULSE PLASMAJET THRUSTERS.....19

Perspectives for improving overall and mass characteristics of ablation pulse plasmajet thrusters (APPT) designed for small spacecraft (SSC) with mass of up to 500 kg are under research. Possibilities for lowering mass of main component parts of APPT, such as power accumulation unit, storage and supply working media system, electronics units, and other constructional elements are considered. It was shown, that the most perspective way to improve overall and mass characteristics of APPT is to lower weight of power accumulation unit by optimizing its energy content and application of power capacitor of raised volume energy. In the near term, it is possible to lower a total mass approximately by 20%.

Key words: small spacecraft, ablation pulse plasmajet thruster, improvement of overall and mass characteristics.

Tyutnev A.P., Sergeev V.V., Semyonov V.T., Stanolevich G.P. (JSC «VNIEM Corporation»)

ON RADIATION STABILITY OF PERMANENT MAGNETS BASED ON RARE-EARTH ELEMENTS.....27

Problem on radiation stability of permanent magnets based on rare-earth elements is under consideration. Results of ground tests for influence of destabilizing factors of outer space on rare-earth magnets are analyzed. A dependence of magnetic induction on neutron flux for two types of permanent magnets of Sm – Co and Nd – Fe – B differing by Curie temperature are presented.

Key words: permanent magnets based on rare earth elements, residual induction, radiation stability.

Radionov N.V., Kargu D.L. (Military space academy n.a. A.F. Mozhaysky)

Fadeev A.S. (FSUE «TsENKI»)

FORMATION OF INNOVATIVE INVESTMENT TERRITORIAL CLUSTER FOR CREATION AND EXPLOITATION OF LAUNCHING SITE «VOSTOCHNY».....31

Important issues on development of strategy for creation of structure and business mechanism providing creation and exploitation of launching site «VOSTOCHNY» at limited financial resources are considered. A new solution resolving problem of technical-and-economic optimization of «Vostochny» launching site territorial cluster structure taking into account cooperation of branch and territorial enterprises and organizations is proposed.

An optional strategy based on meso-level was put to solve this problem and methodology.

Key words: launching site, organizational and technical system, investments, cluster, meso-level, option, strategy, optimization.

Yurkevich E.V. (MPI n.a. V.A. Trapeznikov, RAS)

Azarenkova N.V. (MSTU MIREA)

Dolkart V.M. (JSC «VNIEM Corporation»)

ENTROPY REGULATION METHODS IN CORPORATE INFORMATION SYSTEMS.....39

A task to minimize errors in messages supplied from data basis of corporate information system is set. Possibilities to regulate entropy as noise characteristics in information support of spacecraft control system is proposed. Reasons of noise increment at start and realization of web sites responsible for access to data base is shown. The grade of data basis entropy is proposed to calculate in accordance with clusterization of importance of messages to be transmitted as per IDEF1 methods and revelation of the most probable experiment outcome in Bernoulli binominal distribution. A mechanism to upgrade a corporate information system hardware component was proposed for interim determined by developer.

Key words: web site, data basis, entropy, message error, corporate information system, clusterization, signal flow, IDEF1 mechanism, most likely outcome of experiment, Bernoulli binominal distribution, hardware modernization.

ELECTROMECHANIC EQUIPMENT AND AUTOMATIC CONTROL SYSTEMS

Ajnakin V.A. (JSC «VNIEM Corporation»)

Yatsuk V.G. (JSC «NIEM»)

RESEARCH OF WAVE PROCESSES IN FREQUENCY TRANSDUCER – CONNECTING CABLE – ELECTRIC MOTOR SYSTEM.....49

Wave processes arising in drives control system of control and protection system control rods of NPP pressurized water reactors are considered, experimental data are presented, technical solution enabling to eliminate negative influence of wave processes is proposed as well.

Key words: wave processes, frequency transducer, autonomous voltage inverter, pulse-width modulation, electric motor, step motor, wave filter.

PAGES OF NATIONAL SPACE METEOROLOGY HISTORY

Makridenko L.A., Volkov S.N., Gorbunov A.V., Khodnenko V.P. (JSC «VNIEM Corporation»)

TECHNOLOGIC METEOROLOGICAL SATELLITE «METEOR-M1».....53

Problems of creation and flight development tests of technologic meteorological satellite are considered, support systems are described, scientific informative hardware and general characteristics of satellite are presented.

Key words: satellite, onboard support systems, television, infrared and actinometric hardware, control system.
